

District and Club database

Release Notes – 12.21.09

Summary

Rotary International is received a large number of duplicate emails for members being deleted. This appears to be deletes that are happening with members that are duplicated in the database.

RI Update Verification

As a an immediate work around, if the Member ID is 0, and a delete is being made by a club officer – level 4, the following panel will appear on the member delete screen.

Member Type: **Active**

(ID=800070145)

Cancel

Delete

Section 1 - RI Update Verification:

Is this delete **only** for the **local** district database? **Yes** **No**

NOTE: This option is only displayed when the Member's RI ID is "0" (or your security level > 6). By default, the radio button is "YES", this is a local database delete only. Which means the member record will be terminated in the **DaCdb** database, but **RI** will not get a notification to terminate them in their database.

However, if you select the NO option above, then **RI** will be notified of this termination.

BY default, the radio option that this is only a local delete will be presented. This means that when this member is terminated – NO RI email will be sent – the member will only be deleted (logically) out of the database.

If you select the NO option, and RI Email will be sent. This is the normal operation.

It should be point out, this panel will only be displayed if the Member ID is 0.
